Ideation Phase

Brainstorm & Idea Prioritization

Date	04 October 2026
Team ID	SWTID-2026-6870
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization

Brainstorming gave the team a free and open space to list ideas for improving the IT procurement process. Volume was preferred over perfection first, then the ideas were grouped and ranked by **impact** and **effort**.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team met to review how standard laptop requests are handled today. The problem statement selected for the project is:

> Selected problem: Standard laptop orders need configuration, but the configuration task is created and assigned manually. This step is easily missed or delayed, so users wait longer and the IT department uses its people inefficiently.

Role	Responsibility in brainstorming
IT procurement representative	Explained how laptop orders are raised and approved
Hardware team representative	Explained how laptops are configured and what information the task needs
ServiceNow developer (project owner)	Suggested platform features (Flow Designer, Service Catalog) that can automate the process

Team members: [add your team member names here].

Step-2: Brainstorm, Idea Listing and Grouping

Group	Ideas listed
Automation	Use Flow Designer to react to every Standard Laptop order Create the configuration task automatically with the Create Catalog Task action Set the short description and description automatically
Assignment	Assign the task to the Hardware group automatically Round-robin assignment inside the Hardware group Escalate if a task stays unassigned
Approval & tracking	Keep the approval step in the Service Catalog request Show the generated task under the Requested Item SLA dashboard for configuration time
Communication	Email the requester when the task is created Notify the Hardware team on new tasks Status updates on the request

Group	Ideas listed
Alternatives (rejected)	Manual checklist for IT staff Build a separate custom application from scratch

Step-3: Idea Prioritization

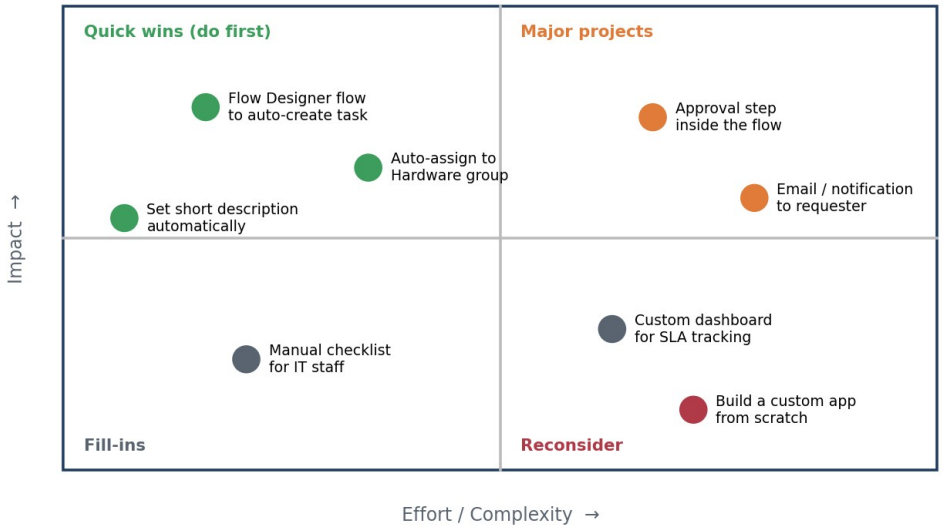

Figure 1: Impact vs effort matrix of the brainstormed ideas

No.	Idea	Impact	Effort	Decision
1	Flow Designer flow triggered from Service Catalog	High	Low	Selected – core of the project
2	Create Catalog Task action with fixed short description	High	Low	Selected
3	Auto-assign task to Hardware group	High	Low	Selected
4	Approval handling on the request (approver approves REQ)	Medium	Low	Selected
5	Email notification to requester	Medium	Medium	Future scope
6	SLA / dashboard reporting	Medium	High	Future scope
7	Custom application from scratch	Low	High	Rejected
