Define the Problem Statements

Date	04 October 2026
Team ID	SWTID-2026-6870
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement

A customer problem statement describes the problem from the user's point of view. For this project three users are affected by the manual standard-laptop procurement process: the IT procurement team member, the employee who requested the laptop, and the Hardware team member who configures it.

Problem statements

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A member of the IT procurement team	Order standard laptops so they are configured promptly when they arrive	The configuration task is created and assigned by hand and is often missed or delayed	There is no automation connecting an approved order to the Hardware team	Frustrated and worried about user wait times
PS-2	An employee who requested a standard laptop	Receive a configured laptop soon after my request is approved	I do not know if configuration has started and it takes a long time	Task assignment depends on manual follow-up between teams	Anxious and unproductive while I wait
PS-3	A Hardware team member	Receive clear configuration tasks for incoming laptops	Tasks arrive late or without a proper description	Requests are triaged and assigned manually	Overloaded and unsure of priorities

Problem summary

- Manual task creation for each standard laptop order causes delays and oversights.
- Resources in the IT department are not allocated efficiently because tasks are assigned manually.
- Users are frustrated because laptops are not configured on time.

Desired outcome

When a standard laptop request is approved, a catalog task with a clear short description should be generated automatically and assigned to the **Hardware** group, with no manual effort from the procurement team.
