Ideation Phase

Empathize & Discover

Date	04 October 2026
Team ID	SWTID-2026-6870
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Empathy Map Canvas

An empathy map captures what users say, think, do and feel. It helped the team understand the people affected by the manual laptop procurement process before designing the automated flow.

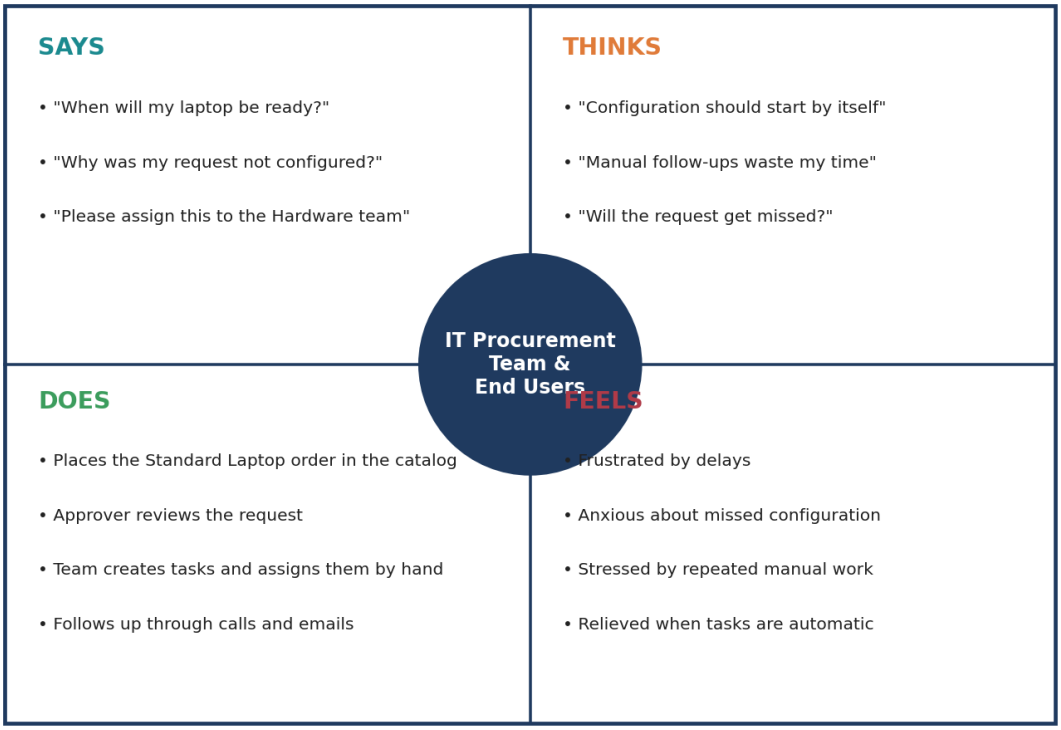

Figure 1: Empathy map – IT procurement team and end users

Pains and gains

Pains	Gains
Configuration task is forgotten or delayed	Task is created automatically after the order
Manual creation and assignment effort	Task goes straight to the Hardware team
No visibility of configuration progress	Requester can see the task under the request item
Repeated follow-up calls and emails	Less manual work and fewer errors

Insights

- Users care most about **speed and certainty**: they want to know the laptop will be configured without chasing anyone.
- The Hardware team needs a task that already contains the right description and assignment group.

- Automating the hand-off between approval and configuration removes the biggest source of delay.
