Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	04 October 2026
Team ID	SWTID-2026-6870
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Flow creation	Create a flow named "Standard laptop task" in Flow Designer Application scope: Global Run As: System User
FR-2	Flow trigger	Add the Service Catalog trigger so the flow starts when a catalog item is ordered
FR-3	Catalog task creation	Add the Create Catalog Task action Requested Item = Requested Item record from the trigger (table: Catalog Task [sc_task]) Short description: "Laptop needs to Configured"
FR-4	Task field values	Description = "Laptop needs to Configured" Assignment group = Hardware Approval = Approved
FR-5	Flow activation & assignment	Save and activate the flow Attach the flow to the Standard Laptop catalog item under Process Engine (Maintain Items)
FR-6	Ordering & approval	Order Standard Laptop from Service Catalog > Hardware using Order Now Approver approves the request from the Approvers related list
FR-7	Verification	Open the Requested Item and check the Catalog Tasks related list for the generated task with short description and assignment group

Non-functional Requirements

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Requesters use the standard Service Catalog; no extra training is needed. Generated task has a clear short description.
NFR-2	Security	Flow runs as System User; approval is done by an authorised approver; access to records follows ServiceNow roles and ACLs.
NFR-3	Reliability	Every Standard Laptop order triggers the same flow, so tasks are not missed. Flow executions can be reviewed in Flow Designer.

NFR No.	Non-Functional Requirement	Description
NFR-4	Performance	The catalog task is generated automatically by the platform without manual effort, shortly after the request is processed.
NFR-5	Availability	Depends on the availability of the ServiceNow instance (cloud-hosted platform).
NFR-6	Scalability	The same pattern can be reused for other catalog items and assignment groups by creating or copying flows.
