Project Design Phase

Proposed Solution Template

Date	04 October 2026
Team ID	SWTID-2026-6870
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The IT procurement process for standard laptops depends on manual steps. Configuration tasks are created and assigned by hand, so they are delayed or missed, users wait longer and IT resources are used inefficiently.
2.	Idea / Solution description	Create a ServiceNow Flow Designer flow named "Standard laptop task". It uses the Service Catalog trigger and the Create Catalog Task action to generate a task with short description "Laptop needs to Configured", assignment group Hardware and approval Approved. The flow is attached to the Standard Laptop catalog item through the Process Engine tab, so every order creates the task automatically.
3.	Novelty / Uniqueness	Fully automated hand-off from approved order to the Hardware team using only low-code configuration. No scripting or custom application is needed.
4.	Social Impact / Customer Satisfaction	Shorter waiting time for employees, fewer follow-ups, less stress for IT staff and a more reliable experience for every requester.
5.	Business Model (Revenue Model)	Internal efficiency solution. Value comes from saved effort and faster laptop delivery rather than direct revenue. It can be reused as a template service for other IT teams or clients using ServiceNow.
6.	Scalability of the Solution	The flow can be copied for other hardware items (monitors, mobiles) and other assignment groups. More actions such as notifications or SLAs can be added to the same flow.
