Project Design Phase

Solution Architecture

Date	04 October 2026
Team ID	SWTID-2026-6870
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Solution Architecture

Solution architecture bridges the gap between the business problem and the technology solution. For this project the goals are to:

- Find the best technology to remove manual effort from standard laptop procurement.
- Describe the structure and behaviour of the automation to stakeholders.
- Define the features, development phases and requirements of the solution.
- Provide the specification by which the solution is built, managed and delivered.

Solution Architecture Diagram

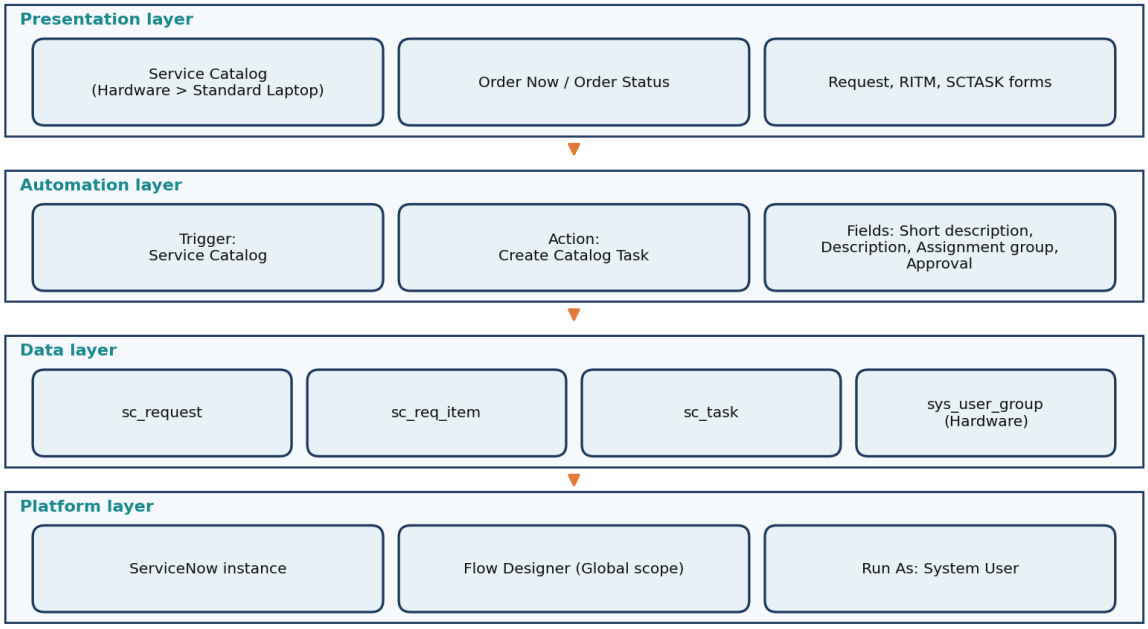

Figure 1: Layered solution architecture

Architecture and data flow

Step	Component	What happens
1	Service Catalog	Employee opens Hardware > Standard Laptop and clicks Order Now
2	Request / Requested Item	ServiceNow creates REQ and RITM records and shows the Order Status page
3	Approval	The approver approves the request in the Approvers related list

Step	Component	What happens
4	Flow Designer	Flow "Standard laptop task" starts through the Service Catalog trigger because it is attached to the item (Process Engine)
5	Create Catalog Task	Action creates a record in sc_task linked to the Requested Item with short description, description, assignment group and approval values
6	Hardware group	Task appears in the Catalog Tasks list of the RITM, assigned to Hardware, ready for configuration
